# Digital Literacy Project Report

**Name:** Ruba Nizam Khan
**Registration Number:** 25BCY10050
**Branch:** Computer Science Engineering in Cybersecurity and Digital Forensics
**Year:** 1st Year
**Course Code:** CSE0001
**Date:** 29/March/2026

# INTRODUCTION

In today's digital age, understanding how to use technology safely and effectively is very important. This project focuses on the concept of digital literacy and its role in a student's academic and professional life. As a Student Digital Ambassador, the purpose of this project is to spread awareness about responsible use of digital tools and platforms. The project includes five tasks that cover key areas such as creating a visual infographic, building a professional digital portfolio, exploring coding platforms, learning proper email communication, and understanding cybercrime. Through these activities, I was able to gain practical knowledge and improve my digital skills. This project also helped me become more confident in using online tools responsibly and effectively.

# TASK 1

In Task 1, I created a digital literacy awareness infographic using Canva.

The aim of this infographic was to present important information in a simple and visually appealing manner. I included key topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices, and maintaining a professional online presence. I used icons, colours, and structured sections to make the design clear and easy to understand. Canva provided a variety of templates and design elements, which made the process creative and interesting.

One challenge I faced was organizing all the information in a single page without making it look crowded. However, I managed to balance the content and design effectively. This task helped me understand how to communicate ideas visually and create informative content for others.

# TASK 2

In Task 2, I built my digital portfolio by creating accounts on platforms such as GitHub, LinkedIn, and Kaggle. These platforms are important for students as they help in building a professional online presence.

GitHub is used to store and showcase coding projects, LinkedIn is a professional networking platform, and Kaggle is useful for learning data science and practicing coding.

I completed the basic setup of each platform by adding my educational details and a short introduction. This task helped me understand how these platforms can be used for career development.

In the future, I plan to use GitHub to upload my projects, LinkedIn to connect with professionals and explore opportunities, and Kaggle to improve my technical skills. Overall, this task highlighted the importance of maintaining a professional digital identity.

# TASK 3

In Task 3, I explored **Codechef** platform. I practiced basic coding by solving a beginner level problem on the platform, which helped me understand simple programming concepts and problem solving techniques.

In addition, I created a Google Form titled “Digital Literacy Quiz” with five questions, including both multiple choice and short answer types. I also linked the form to a Google Sheet to collect and view responses.

This task helped me learn how to create online quizzes and manage data efficiently. These tools are very useful in academics for conducting surveys, collecting feedback, and testing knowledge. Through this task, I gained practical experience in using digital platforms for both learning and collaboration.

# TASK 4

In Task 4, I learned about professional email writing and digital communication. I wrote two formal emails one requesting an assignment deadline extension and another applying for a summer internship. While doing this task, I understood the importance of proper email structure, including a clear subject line, polite greeting, well organized content, and a professional sign off.

A situation where poor digital communication can cause problems is when a student sends an email to a professor without a subject line, proper greeting, or clear message. For example, if a student writes **"Send me the assignment details"** without any introduction or polite tone, it may appear rude or disrespectful. This can create a negative impression and may even result in the request being ignored.

Such problems can be avoided by using polite language, writing complete sentences, and following proper email etiquette. This task helped me understand how effective communication plays an important role in academic and professional environments.

# TASK 5

n Task 5, I studied cybercrime and created a case study on phishing attacks.

I learned how attackers use fake messages and websites to trick users into sharing personal and financial information. I also prepared a prevention checklist with important safety tips, including secure password usage, avoiding suspicious links, and protecting OTPs.

I was surprised to learn how easily people can fall victim to such scams due to lack of awareness. This task made me more cautious about my online activities. As a result, I will be more careful while accessing links, checking website authenticity, and making online transactions.

This task increased my awareness about cyber safety and responsible internet usage.

## CONCLUSION

This project provided valuable insights into the importance of digital literacy in today's world. It helped me learn how to use digital tools effectively, create a professional online presence, and communicate properly through emails. I also gained awareness about cybercrime and the importance of online safety. Each task contributed to improving my practical skills and understanding of digital platforms. Overall, this project was a meaningful learning experience that will help me in my academic journey and future career.
